LincWare Introduces Admit+, a Cloud-based Admissions Solution for Long-term Care
Reduce Compliance Risk, Maximize Reimbursements, Improve Resident Experience

November 17, 2016 -- Rochester, NY. LincWare, a leading provider of comprehensive, cloud-based solutions for healthcare, human resources, and financial organizations, has introduced Admit+, the first module in a product suite of smart solutions for long-term care providers. The Admit+ solution protects nursing facilities by insulating them from compliance risk, ensuring proper reimbursements, and improving the resident admissions experience. Admit+ is a powerful tool to ensure that personnel are capturing all the critical data at once, including signatures for the resident or Power Of Attorney (POA), at the point of entry into the facility and provides a standardized solution that can be shared between facilities.

"With shrinking margins and increased regulations, operating a nursing facility is becoming more difficult which makes it harder on both personnel and families. We want to make caring for our greatest generation a little easier," said Darren Mathis, chief executive officer, LincWare. "The Admit+ solution reduces the stress on caregivers, families and residents by automating the admission process with intuitive, easy-to-complete smart forms, while at the same time, saves time, labor costs and reduces risk by improving the accuracy of resident admission documentation."

Designed with input from LincWare's client, Western Home Communities of Cedar Falls, Iowa, information from the Admit+ solution can be shared in real time with every department. A graphical dashboard provides a method for collaborative care and better record-keeping resulting in less likelihood of human error.

The Admit+ solution eases the transition of residents into nursing facilities by providing:

- Sign Once, Sign All feature ensures not a single signature or document is missed
- Version-controlled repository allows all documents to be easily located upon audit request
- Built-in insurance verification for faster, more accurate decisions
- Automated *Help* dialog boxes guide the process of completing documents
- Single-click compliance automatically generates required documents
- Power of Attorney portal for remote completion and signing of documentation

LincWare is the developer of a product suite of smart automation solutions, including Admit+; EOS, an employee onboarding solution, and LincDoc, an eForms application that simplifies paper-based processes where compliance and efficiency are critical. Founded in 2007 by Darren Mathis, chief executive officer, and Eric Lenio, chief technology officer, LincWare is a privately owned company with offices in Rochester, New York. LincWare's customers includes healthcare organizations, an NFL franchise, financial services, universities, municipal governments, and payroll companies.
